EDUCATION

Vellore Institute of Technology, Vellore, India

Bachelor of Technology, Computer Science Engineering; CGPA: 8.44

June 2022 – February 2026

Narayana Intermediate College, Vijayawada, India

Board of Intermediate Education; Percentage: 80.4%

June 2020 – August 2022

SKILLS SUMMARY

Languages: Java, Python, SQL, C, C++

Core Competencies: Data Structures & Algorithms, Object-Oriented Programming, RAG

Frameworks & Libraries: LangGraph, Spring, Spring Boot, React.js

Tools: N8N, Cursor, MySQL, Postman, LangSmith

EXPERIENCE

ArisData.ai

February 2026

AI Software Engineering Intern

- Building custom data connectors and integration pipelines for Glean's Enterprise AI Search platform for ArisData.ai
- Engineered data pipelines enabling AI-powered enterprise search across 12 CRM objects using OAuth and delta sync

PROJECTS

Agentic PlaceDiscover and Negotiation AI - Using LangGraph | [LINK](#)

Nov 2025 – Dec 2025

- Built an agentic LangGraph state machine: Agent-1 runs SerpStack search and WebScraping.AI for Google reviews, ranks a "winner," and passes full context to Agent-2 via MemorySaver checkpoints.
- Implemented human-in-the-loop negotiation: LLM drafts strategy with sentiment cues, execution pauses via LangGraph interrupts for approval/edits, then resumes cyclic SMS negotiation using SMSMobileAPI.
- Delivered a production-ready Fast API backend with streaming UI, Pydantic-typed shared state, conditional routing and LangSmith tracing—showcasing agentic autonomy and context-aware tool use.

EXAM_POINT – Using Generative AI | [LINK](#)

May 2025 – June 2025

- Developed a full-stack AI-enabled exam platform using Spring Boot and React, allowing teachers to create and manage online exams.
- Integrated Ollama AI for long and fill-in-the-blank question evaluation, achieving 96% semantic alignment with teacher expectations through tailored prompt engineering.
- Engineered prompts to support syntactically varied answers to validate conceptually correct responses.

LinkedIn Automation Agentic Platform – Using Selenium | [LINK](#)

January 2026 – February 2026

- Built a 4-phase LinkedIn automation pipeline using Selenium and SerpAPI, orchestrating company research with hire-potential scoring, connection requests, acceptance detection, and personalized messaging.
- Implemented a hire-potential scoring system ranking contacts based on title relevance, hiring authority, and alumni proximity.
- Designed a SQLite lifecycle tracker with a background auto-scheduler for hands-free daily outreach.

CERTIFICATES

Glean Partner Technical Accreditation (Glean) CERTIFICATE	March 2026
The Complete Agentic AI Engineering (Udemy) CERTIFICATE	July 2025
IBM Certified watsonx Generative AI (IBM) CERTIFICATE	June 2025
AWS Certified Solutions Architect - Associate (Amazon) CERTIFICATE	June 2025

ACHIEVEMENTS

- Ranked in the top 6.9% of LeetCode, solving numerous problems in 2024 and 2025.
- Active on GitHub with 50+ public repositories, including AI-Agents, full-stack projects, and RESTful APIs.
